

Allscripts MyWay

Powerful integration for practice performance

Allscripts MyWay™ fully connects the clinical and business sides of a physician practice with a truly integrated electronic health record (EHR) system and physician practice management system (PM). Unified clinical and operational workflow, centralized patient data and automated medical billing tools allow practices to advance their financial health while delivering the highest-quality patient care outcomes.

Allscripts MyWay (Version 9.1) is ONC-ATCB certified, achieved Drummond Group certification (certification # 05262011-8726-8), and is recognized for its advanced e-prescribing and clinical data-sharing capabilities and ability to meet physician practices' functionality, interoperability and security needs.

With Allscripts MyWay, physician practices can best allocate resources and improve staff efficiency using workflow-based dashboards, paperless recordkeeping and sophisticated clinical decision support. Allscripts MyWay boosts patient safety, staff productivity, and physician and patient satisfaction. Allscripts MyWay EHR/PM focuses on the core elements that have been identified as essential to transformative use of health data and technology and will qualify you for the ARRA monies:

ELECTRONIC HEALTH RECORD (EHR): A sophisticated, intuitive patient health record and care system that supports e-prescribing, flexible point-of-care-documentation, medical image management, and centralized patient data.

PRACTICE MANAGEMENT (PM): An advanced practice management system that helps practices keep their fingers on the pulse of appointments, registration, eligibility, billing and advanced claims management.

PATIENT PORTAL Functionality that enables patients to view and interact with their personal health information, including medications, allergies, growth charts, appointments, physician messaging, educational information, medical history and more.

PHYSICIAN & EMPLOYER PORTALS: Interactive technology that enables correspondence to be sent electronically inviting recipients to log in, read a provider letter, and access their continuity of care records (CCR) - critical to meeting the ARRA "meaningful use" requirements.
