

Patient Portal

Improve Patient-Provider relationships

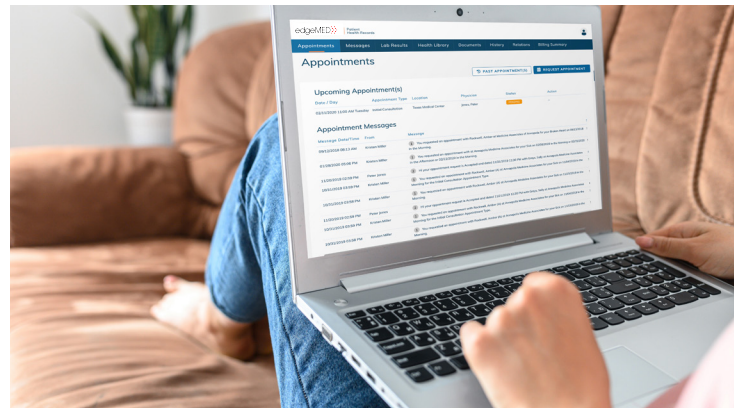

A patient portal is a secure, online platform that eliminates administrative tasks for providers and their patients. From scheduling appointments to viewing lab results and even paying bills online, Patient Portal allows for greater control over patient health, 24/7. From anywhere with internet, patients can communicate securely, save time, and receive support between care—all from a computer or tablet device.

Before an appointment, patients can:

- Update their information (i.e. changes in insurance, changes in medical history)
- Fill out appointment intake forms
- View lab results and pre-appointment instructions

Between appointments, patients can:

- Communicate securely with their provider
- Schedule new appointments
- Update family, medical, and social history
- Access follow-up care instructions
- View and pay outstanding statements
